CRIMINAL MIND AI — HOW IT WORKS

Fraud Rarely Looks Like a Ring.

LepreCon cross-references thousands of quiet signals to reveal networks no single claim shows alone.

1

COUNTLESS SMALL THREADS

Claims, garages, attorneys, chiropractors, medical examiners

Alone, nothing looks suspicious

2

CROSS-REFERENCED, AUTOMATICALLY

Millions of quiet connections, tested

One shared link surfaces

3

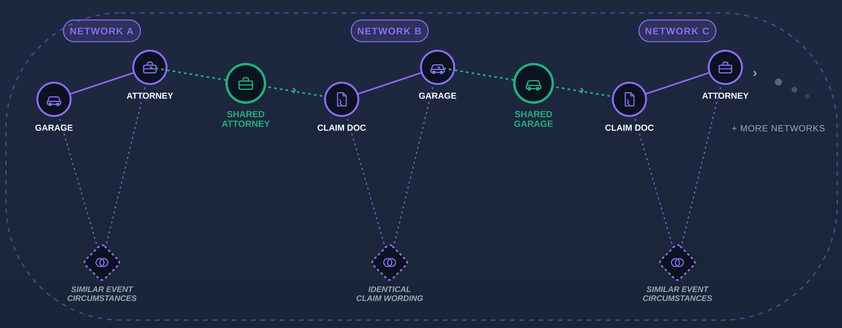
A PATTERN SURFACES

One shared node exposes a ring

That link exposes a network

ONE RING LEADS TO THE NEXT

○ a real entity ◇ a matching pattern



A whole fabric comes into view

ONE REAL EXAMPLE, OUT OF HUNDREDS

One garage. The same front-end damage pattern — always “a parking lot accident.” One connection exposed three rings.

Full case study in our printed handouts at the booth →

We don't just flag claims. We connect the dots — and expose the scheme.

See the network engine at work — next door. →
